February 10 - March 15, 2026

AI Dev Days Hackathon

Microsoft AI Dev Days sparked the inspiration. This hackathon lets you turn it into impact.

Welcome to the AI Dev Days Hackathon

The AI Dev Days Hackathon is the follow-up event to AI Dev Days. If you enjoyed the sessions, demos, and deep dives, now is your chance to turn inspiration into real-world innovation. Transform your learnings from AI Dev Days into production-ready solutions using **Microsoft Foundry**, **Microsoft Agent Framework**, **Azure MCP**, **GitHub Copilot Agent Mode**, and more.

This is a **5-week global challenge** for developers to build AI agents, agentic DevOps workflows, and intelligent applications using Microsoft's AI platform, GitHub, VS Code, and Azure services.

Build with the Purpose-Built AI Platform

Microsoft's AI platform gives developers an end-to-end toolchain for building real, production-ready AI systems. Use Microsoft's newest AI, agent, cloud, and developer technologies to build solutions that solve real-world problems across any industry.

Whether you're creating:

- An AI agent using **Microsoft Agent Framework**

- An Agentic DevOps workflow with **GitHub Copilot Agent Mode**
- A multi-agent application powered by **Model Router**
- A secure enterprise AI app using **Microsoft Foundry**
- An agent-to-agent (A2A) or MCP-connected system using **Azure MCP**
- A next-gen SRE workflow using **Azure SRE Agent**

This hackathon is your playground.

What to Build

Core Requirements

1. **Build an AI-powered solution** using one or more of the following hero technologies: Microsoft Foundry, Microsoft Agent Framework, Azure MCP, or GitHub Copilot Agent Mode.
2. **Deploy to Azure,** your application must leverage Azure services and be deployable to the Azure cloud platform.
3. **Use GitHub for development,** your project must be hosted in a public GitHub repository, developed with VS Code or Visual Studio, and enhanced with GitHub Copilot.

Prizes

Note: Teams may win multiple categories. Grand Prize winners are also eligible for category prizes

Prize Category	Prize	Description
Grand Prize - Challenge winner project: Build AI Applications & Agents using Microsoft AI Platform and tools	· Microsoft Build 2026 in-person ticket (ticket only) (up to 4 team members). · Feature in social promotion · 1-on-1 mentoring session with Microsoft team · $20,000 - ($5,000 per team member, up to 4 team members)	*Best overall solution with real-world impact and innovative use of Microsoft AI platform*
Grand Prize - Challenge winner project: Automate and Optimize Software Delivery - Agentic DevOps	· Microsoft Build 2026 in-person ticket (ticket only) (up to 4 team members). · Feature in social promotion · 1-on-1 mentoring session with Microsoft team · $20,000 - ($5,000 per team member, up to 4 team members)	*Best solution leveraging agentic DevOps to automate CI/CD, incident response, and reliability engineering*
Best Use of Microsoft Foundry Project	· Microsoft Build 2026 in-person ticket (ticket only) (up to 4 team members).	*Demonstrates the capabilities of Microsoft Foundry*

	· $10,000 - ($2,500 per team member, up to 4 team members)	
Best Enterprise Solution	· Microsoft Build 2026 in-person ticket (ticket only) (up to 4 team members). · $10,000 - ($2,500 per team member, up to 4 team members)	*Greatest potential for enterprise adoption with security, responsible AI, governance, and scalability*
Best Multi-Agent System	· Microsoft Build 2026 in-person ticket (ticket only) (up to 4 team members). · $10,000 - ($2,500 per team member, up to 4 team members)	*Most sophisticated multi-agent orchestration using Microsoft Agent Framework, A2A protocols, or MCP servers*
Best Azure Integration	· Microsoft Build 2026 in-person ticket (ticket only) (up to 4 team members). · $10,000 - ($2,500 per team member, up to 4 team members)	*Most effective integration with Azure services (AI Services, Functions, AKS, or Azure Database)*

What to Submit

Your submission must include:

1. **Working project** built with the required developer tools that meets the core requirements.
2. **Project description** explaining the features, functionality, problem solved, and technologies used.
3. **Demo video (2 minutes max)** showing your project in action. Upload to YouTube or Vimeo and provide the public link. Must not include third-party trademarks or copyrighted material unless you have permission.
4. **Public GitHub repository** with your source code for judging and testing.
5. **Architecture diagram** illustrating how your solution uses Microsoft Foundry, Agent Framework, Azure MCP, GitHub Copilot, and/or Azure services.
6. **Team member information** including Microsoft Learn usernames for all participants.

Judging Criteria

Projects are evaluated across **five equally-weighted dimensions** (20% each):

1. Technological Implementation (20%)

- Quality software development practices
- Effective use of hero technologies
- Well-structured, documented, and maintainable code

2. Agentic Design & Innovation (20%)

- Creative application of Agentic AI patterns
- Sophisticated agent orchestration or multi-agent collaboration

- Novel AI implementation or meaningful improvements

3. Real-World Impact & Applicability (20%)

- Significance of the problem being solved
- Production deployment readiness
- Potential impact on developers, businesses, or end users

4. User Experience & Presentation (20%)

- Well-designed and intuitive user experience
- Clear communication of project value in demo
- Balanced frontend and backend implementation

5. Adherence to Hackathon Category (20%)

- Comply with the description of the applicable hackathon category.

Resources

Get started with these learning resources:

- Microsoft Foundry documentation
- Build agents with Microsoft Agent Framework
- Azure MCP integration guide
- GitHub Copilot Agent Mode documentation
- AI Dev Days recordings

Questions? reach out to the organizing team. Good luck building!

Hackathon Schedule

Registration	Jan 20 - Feb 22, 2026
Hacking	Feb 10 - Mar 15, 2026
Project review	Mar 16 - Mar 22, 2026
Announcements	Mar 25, 2026
